June 2023

The 2022 Kenya Demographic and Health Survey (2022 KDHS) was implemented by the Kenya National Bureau of Statistics (KNBS) in collaboration with the Ministry of Health (MoH) and other stakeholders. Funding for the survey was provided by the Government of Kenya, the United States Agency for International Development (USAID), the Bill & Melinda Gates Foundation, the World Bank, the United Nations Children’s Fund (UNICEF), the United Nations Population Fund (UNFPA), Nutrition International, the World Food Programme (WFP), the United Nations Entity for Gender Equality and the Empowerment of Women (UN Women), the World Health Organization (WHO), the Clinton Health Access Initiative, and the Joint United Nations Programme on HIV/AIDS (UNAIDS). The UN Resident Coordinator office assured the coordination of UN agencies supporting the 2022 KDHS. ICF provided technical assistance through The DHS Program, a USAID-funded project providing support and technical assistance in implementing population and health surveys in countries worldwide.

Additional information about the 2022 KDHS may be obtained from Kenya National Bureau of Statistics (KNBS), P.O. Box 30266-00100, GPO Nairobi, Kenya; telephone: +254-20-3317583, +254-20-2911000/1, +254-20-3317612/22/23/51; email: directorgeneral@knbs.or.ke, info@knbs.or.ke; website: www.knbs.or.ke.

A.1 INTRODUCTION

This section will include a description of the objectives of the survey, the overall sample size, survey domains, and a description of any sub-samples used. The 2022 Kenya Demographic and Health Surveys (KDHS) is the 7th survey of its kind to be carried out in Kenya. Previous Demographic and Health Surveys were implemented in 1989, 1993, 1998, 2003 and 2008–09 and 2014. The primary objective of 2022 KDHS is to provide up-to-date estimates of basic socio-demographic, nutrition and health indicators. Specifically, the 2022 KDHS collected information on fertility levels and contraceptive prevalence; childhood mortality; maternal and child health; Early Childhood Development Index (ECDI); anthropometric measures for children, women and men; children’s nutrition; woman’s dietary diversity; knowledge and behaviour related to transmission of HIV and other sexually transmitted diseases; non-communicable diseases and other health issues; extent and pattern of domestic violence; and female genital cutting.

To achieve this, a nationally representative sample of 42,300 households was selected for the survey. All women age 15–49 who were usual residents of the selected households or who slept in the households the night before the survey were eligible for interviews. In addition, in half of the household sample, all men age 15–54 who were usual residents of the selected households or who slept in the households the night before the survey were eligible for individual interviews. Also in this sub-sample, anthropometry (weight and height measurement) was taken for all eligible men, women and all children under five years. Anthropometry for children was also taken in the other half of the household sample. In three-quarters of the household sample, a domestic violence module was administered to one randomly selected eligible woman per household while in the other quarter of the household sample, a domestic violence module was administered to one randomly selected eligible man per household.

The 2022 KDHS was designed to provide reliable estimates at the national level, for rural and urban areas separately, and, for some indicators, at the county level for all the 47 counties.

A.2 SAMPLE FRAME

The sample for the 2022 KDHS was drawn from the Kenya Household Master Sample Frame (K-HMSF). This is the frame that Kenya National Bureau of Statistics (KNBS) currently operates to conduct household-based sample surveys in Kenya. The frame is based on the 2019 Kenya Population and Housing Census (KPHC) data where a total of 129,067 Enumeration Areas (EAs) were developed. Of these EAs, 10,000 were selected with probability proportional to size to create the K-HMSF. The 10,000 EAs were randomised into four equal subsamples. A survey can utilise a sub-sample or a combination of sub-samples based on the sample size requirements. The 2022 KDHS sample was drawn from subsample one of the frame. The Constitution of Kenya, 2010, established a devolved system of government where Kenya is divided into 47 counties. To design the frame, each of the 47 counties in Kenya was stratified into rural and urban strata, resulting in 92 strata since Nairobi City and Mombasa counties are purely urban.

Kenya undertook a Population and Housing Census in 2019, where a total of 12,040,701 households were realised. **Table A.1** shows the distribution of the households and population by county and type of residence based on the 2019 Census data. The majority (61%) of the households are in rural areas while 39% of households are in urban areas, with counties of Nairobi and Mombasa being purely urban. The share of households in a county relative to total household population in Kenya varies from 0.3% in Lamu County to 9.2% in Nairobi City County.

Table A.1 Population and household distribution

Distribution of population and households by county and type of residence

County	Population			Number of households			Share of households to total number of household	Share of county that is urban

Table A.2 indicates the distribution of Enumeration Areas (EAs) developed for the 2019 Kenya Population and Housing Census (KPHC) and the number of EAs in the Kenya Household Master Sample Frame (K-HMSF). In total, 128,239 EAs were developed for the census out of which 79,115 were rural EAs while 49,124 were urban EAs. There are 5,688 rural EAs and 4,312 urban EAs in the K-HMSF which was the sampling frame used for the 2022 KDHS.

A.3 SAMPLE DESIGN AND IMPLEMENTATION

The 2022 KDHS employed a two-stage stratified sample design whereby, in the first stage, 1,692 clusters were selected from the K-HMSF using Equal Probability Systematic Sampling Method (EPSSM). The clusters were selected independently in each sampling stratum. Household listing was carried out in all of the selected clusters, and the resultant list of households served as a sampling frame for the second stage of selection, where 25 households were selected from each cluster. However, after the household listing procedure, it was found that some clusters had less than 25 households; hence, all of the households from these clusters were selected into the sample. This resulted in 42,022 households being sampled for the 2022 KDHS. Interviews were conducted only in the pre-selected households and clusters; no replacement of the pre-selected units was allowed during the survey data collection stages.

Household listing was done using Computer Assisted Personal Interviews (CAPI) and data transmitted to a central server for processing. During the listing exercise, geo-data was collected to assist in identification of the selected households. All the census EAs were standardised to have a Measure of Size (MoS) defined as an average of 100 households with a lower limit of 50 households and an upper limit of 149 households. Large EAs with more than 149 households were standardised by segmenting them into nearly equal-sized segments and one segment was randomly selected and listed to form the cluster. There was no merging of EAs that had less than 50 households. The listing exercise utilised interactive maps which ensured that, in every EA, all the households were listed within the EA boundaries.

Table A.3 shows the distribution of sampled clusters and households by County and type of residence while **Figure A.1** shows the spatial distribution of the cluster sample for the 2022 KDHS. **Table A.4** shows the distribution of the expected number of completed interviews with women age 15–49 and men 15–49 by residence for each of the 47 counties. To ensure that the survey precision is comparable across counties, a power allocation was used to allocate the sample to each sampling stratum. The survey sample size was computed at 42,300 conventional households, 16,650 in urban areas and 25,650 in rural areas. The sample was expected to result in approximately 33,137 completed interviews with women age 15–49 and about 14,818 completed interviews with men age 15–54. The expected number of completed interviews were estimated based on the findings of the 2014 KDHS on an average number of eligible men and women per household and questionnaire completion rates for the household and individual questionnaires.

A.4 SAMPLE PROBABILITIES AND SAMPLING WEIGHTS

Due to the nonproportional allocation of the sample across the different strata and the nonresponse, sampling weights must be used in all analyses using the 2022 KDHS data to ensure that survey results are representative at both the national and at the county level. Since the 2022 KDHS sample is a two-stage stratified cluster sample selected from the master sample, which resulted the sample for 2022 KDHS being a stratified sample of two-phase and two-stage, sampling weights were calculated based on sampling probabilities for each sampling phase and stage and for each cluster where:

- P_{0hi} : first phase and first stage sampling probability of the i^{th} EA in stratum h in the selection of the master sample
- P_{1hi} : the second phase sampling probability of the i^{th} cluster in stratum h from the master sample, and
- P_{2hi} : the second-stage sampling probability within the i^{th} cluster (households).

At the first phase, sample EAs of the master sample were selected with a stratified probability proportional to size (PPS) procedure. Let a_h be the number of EAs selected in stratum h , M_{hi} the measure of size (number of households) of the i^{th} EA according to the sampling frame, and $\sum M_{hi}$ the total measure of size (total number of households) in the stratum h . The probability of selecting the i^{th} EA in the master sample in the first phase and first stage is calculated as follows:

$$P_{0hi} = \frac{a_h M_{hi}}{\sum M_{hi}}$$

Let b_h be the number of EAs selected for 2022 KDHS in the second phase in stratum h of the master sample. Then the probability of selecting EA i in the sample is:

$$P_{1hi} = \frac{b_h}{a_h}$$

Let L_{hi} be the number of households listed in the household listing operation in the cluster i in stratum h , let g_{hi} be the number of households selected in the cluster. The second stage's selection probability for each household in the cluster is calculated as follows:

$$P_{2hi} = \frac{g_{hi}}{L_{hi}}$$

The overall selection probability of each household in cluster i of stratum h in 2022 KDHS is therefore the production of the selection probabilities:

$$P_{hi} = P_{0hi} \times P_{1hi} \times P_{2hi} = \frac{b_h M_{hi}}{\sum M_{hi}} \times \frac{g_{hi}}{L_{hi}}$$

The design weight for each household in cluster i of stratum h is the inverse of its overall selection probability:

$$W_{hi} = 1 / P_{hi}$$

A spreadsheet containing all sampling parameters and selection probabilities was prepared to help calculate the design weights. Design weights were adjusted for household nonresponse and individual nonresponse to obtain the sampling weights for households and for women. Nonresponse is adjusted at the sampling stratum level. For the household sampling weight, the household design weight is multiplied by

the inverse of the household response rate, by stratum. For the women's individual sampling weight, the household sampling weight is multiplied by the inverse of the women's individual response rate, by stratum. After adjusting for nonresponse, the sampling weights are normalised to get the final standard weights that appear in the data files. The normalisation process is aimed at obtaining a total number of unweighted cases equal to the total number of weighted cases using normalised weights at the national level, for the total number of households and for women. Normalisation is done by multiplying the sampling weight by the estimated total sampling fraction obtained from the survey for the household weight and for the individual woman's weight and men's weight, respectively. The normalised weights are relative weights that are valid for estimating means proportions, ratios, and rates, but they are not valid for estimation population totals and nor for pooled data for any analysis.

A.5 SURVEY IMPLEMENTATION RESULTS

Table A.5 and **Table A.6** present the survey results and the response rates for women and men surveys, respectively, by urban, rural and by counties. The male subsample constituted half of the households selected for the survey.

Table A.5 Sample implementation: Women

Percent distribution of households and eligible women age 15–49 by results of the household and individual interviews, and household, eligible women and overall women response rates, according to residence and province (unweighted), Kenya DHS 2022

¹ Using the number of households falling into specific response categories, the household response rate (HRR) is calculated as:

$$\frac{100 * C}{C + HP + P + R + DNF}$$

² The eligible women response rate (EWRR) is equivalent to the percentage of interviews completed (EWC)

³ The overall women response rate (OWRR) is calculated as:

$$OWRR = HRR * EWRR/100$$

Table A.6 Sample implementation: Men

³ The overall men response rate (OMRR) is calculated as:

$$OMRR = HRR * EMRR/100$$

The estimates from a sample survey are affected by two types of errors: (1) non-sampling errors, and (2) sampling errors. Non-sampling errors are the results of mistakes made in implementing data collection and data processing, such as failure to locate and interview the correct household, misunderstanding of the questions on the part of either the interviewer or the respondent, and data entry errors. Although numerous efforts were made during the implementation of the 2022 Kenya Demographic and Health Survey (2022 KDHS) to minimise this type of error, non-sampling errors are impossible to avoid and difficult to evaluate statistically.

Sampling errors, on the other hand, can be evaluated statistically. The sample of respondents selected in the 2022 KDHS is only one of many samples that could have been selected from the same population, using the same design and identical size. Each of these samples would yield results that differ somewhat from the results of the actual sample selected. Sampling errors are a measure of the variability between all possible samples. Although the degree of variability is not known exactly, it can be estimated from the survey results.

A sampling error is usually measured in terms of the *standard error* for a particular statistic (mean, percentage, etc.), which is the square root of the variance. The standard error can be used to calculate confidence intervals within which the true value for the population can reasonably be assumed to fall. For example, for any given statistic calculated from a sample survey, the value of that statistic will fall within a range of plus or minus two times the standard error of that statistic in 95 percent of all possible samples of identical size and design.

If the sample of respondents had been selected as a simple random sample, it would have been possible to use straightforward formulas for calculating sampling errors. However, the 2022 KDHS sample is the result of a multi-stage stratified design, and, consequently, it was necessary to use more complex formulae. The computer software used to calculate sampling errors for the 2022 KDHS is a SAS program. This program used the Taylor linearisation method for variance estimation for survey estimates that are means, proportions or ratios. The Jackknife repeated replication method is used for variance estimation of more complex statistics such as fertility and mortality rates.

The Taylor linearisation method treats any percentage or average as a ratio estimate, $r = y/x$, where y represents the total sample value for variable y , and x represents the total number of cases in the group or subgroup under consideration. The variance of r is computed using the formula given below, with the standard error being the square root of the variance:

$$SE^2(r) = var(r) = \frac{1}{x^2} \sum_{h=1}^H \left[(1 - f_h) \frac{m_h}{m_h - 1} \left(\sum_{i=1}^{m_h} z_{hi}^2 - \frac{z_h^2}{m_h} \right) \right]$$

in which

$$z_{hi} = y_{hi} - rx_{hi}, \text{ and } z_h = y_h - rx_h$$

where h represents the stratum which varies from 1 to H ,
 m_h is the total number of clusters selected in the h^{th} stratum,
 y_{hi} is the sum of the weighted values of variable y in the i^{th} cluster in the h^{th} stratum,

x_{hi} is the sum of the weighted number of cases in the i^{th} cluster in the h^{th} stratum, and
 f_h is the sampling fraction of PSU in the h^{th} stratum

The Jackknife repeated replication method derives estimates of complex rates from each of several replications of the parent sample and calculates standard errors for these estimates using simple formulae. Each replication considers *all but one* cluster in the calculation of the estimates. Pseudo-independent replications are thus created. In the 2022 KDHS, there were 1692 non-empty clusters. Hence, 1692 replications were created. The variance of a ratio r is calculated as follows:

$$SE^2(r) = var(r) = \frac{1}{k(k-1)} \sum_{i=1}^k (r_i - r)^2$$

in which

$$r_i = kr - (k-1)r_{(i)}$$

where r is the estimate computed from the full sample of 1692 clusters,
 $r_{(i)}$ is the estimate computed from the reduced sample of 1691 clusters (i^{th} cluster excluded)
 k is the total number of clusters.

In addition to the standard error, the program computes the design effect (DEFT) for each estimate, which is defined as the ratio between the standard error using the given sample design and the standard error that would result if a simple random sample had been used. A DEFT value of 1.0 indicates that the sample design is as efficient as a simple random sample, while a value greater than 1.0 indicates the increase in the sampling error due to the use of a more complex and less statistically efficient design, such as multistage and cluster sampling. The program also computes the relative standard error and the confidence limits for the estimates.

Sampling errors for the 2022 KDHS are calculated for selected variables considered to be of primary interest for the survey. The results are presented in this appendix for the country, for the urban and rural areas separately, and for each of the 47 counties. For each variable, the type of statistic (mean, proportion, ratio or rate) and the base population are given in **Table B.1**. **Tables B.2 to B.51** present the value of the statistic (R), its standard error (SE), the number of unweighted (N-UNWE) and weighted (N-WEIG) cases, the design effect (DEFT), the relative standard error (SE/R), and the 95 percent confidence limits ($R \pm 2SE$), for each variable. The DEFT is considered undefined when the standard error considering simple random sample is zero (when the estimate is close to 0 or 1).

The confidence interval (e.g., as calculated for *Mean number of children ever born to women aged 15–49*) can be interpreted as follows: the sample estimate from the national sample is 2.206 (R) and its standard error is 0.019 (SE). Therefore, to obtain the 95 percent confidence limits, one adds and subtracts twice the standard error to the sample estimate, i.e., $R \pm 2 \times SE$. There is a high probability (95 percent) that the *true* mean number of children ever born to women aged 15–49 is between 2.168 and 2.244.

For the total sample, the value of the design effect (DEFT), averaged over all variables for the women survey, is 1.509 which means that, due to multistage and clustering of the sample, the average standard error is increased by a factor of 1.509 over that in an equivalent simple random sample.

Table B.1 List of selected variables for sampling errors, Kenya 2022

Variable	Estimate	Base population
HOUSEHOLDS AND POPULATION		
Electricity primary source of lighting	Proportion	De jure household population
Primary reliance on clean fuels and technology for cooking	Proportion	De jure household population
Births registered with civil authority	Proportion	De jure household population under 5
Ownership of at least one ITN	Proportion	Households
Ownership of at least one ITN for every two persons	Proportion	Households (with at least one person who stayed in the household the night before the survey)
Improved drinking water source	Proportion	De jure household population
At least basic drinking water service	Proportion	De jure household population
Water available when needed	Proportion	De jure household population
Improved sanitation facility	Proportion	De jure household population
At least basic sanitation service	Proportion	De jure household population
Using open defecation	Proportion	De jure household population
Using a handwashing facility with soap and water	Proportion	De jure household population for whom handwashing place was observed or with no on-site place for handwashing
WOMEN		
Urban residence	Proportion	Women 15–49
No education	Proportion	Women 15–49
Secondary education or higher	Proportion	Women 15–49
Literacy	Proportion	Women 15–49
Use of the internet in last 12 months	Proportion	Women 15–49
Current tobacco use	Proportion	Women 15–49
Currently married/in union	Proportion	Women 15–49
Married before age 15	Proportion	Women 20–49
Married before age 18	Proportion	Women 20–49
Had sexual intercourse before age 18	Proportion	Women 20–49
Age specific fertility rate 15–19	Rate	Women-years of exposure to childbearing at age 15–19 in the 3 years preceding the survey
Total fertility rate (3 years)	Rate	Women-years of exposure to childbearing
Currently pregnant	Proportion	Women 15–49
Mean number of children ever born to women age 40–49	Mean	Women 40–49
Mean number of children ever born to women age 15–49	Mean	Women 15–49
Mean number of living children to women age 15–49	Mean	Women 15–49
Median birth interval	Median	Non-first births in the 5 years preceding the survey
Mean age at menarche	Mean	Women 15–49
First birth before age 18	Proportion	Women 20–49
Want to delay next birth at least 2 years	Proportion	Currently married women 15–49
Want no more children	Proportion	Currently married women 15–49
Ideal number of children	Mean	Women 15–49 with numeric responses
Total wanted fertility rate (3 years)	Rate	Women-years of exposure to childbearing
Currently using any contraceptive method	Proportion	Currently married women 15–49
Currently using any modern method	Proportion	Currently married women 15–49
Currently using pill	Proportion	Currently married women 15–49
Currently using injectables	Proportion	Currently married women 15–49
Currently using implants	Proportion	Currently married women 15–49
Currently using male condoms	Proportion	Currently married women 15–49
Currently using any traditional method	Proportion	Currently married women 15–49
12 month discontinuation rate due to method failure	Rate	Women 15–49
12 month discontinuation rate due to any reason	Rate	Women 15–49
12 month discontinuation rate due to switching to another method	Rate	Women 15–49
Unmet need for spacing	Proportion	Currently married women 15–49
Unmet need for limiting	Proportion	Currently married women 15–49
Unmet need total	Proportion	Currently married women 15–49
Demand satisfied by modern methods	Proportion	Currently married women 15–49
Participation in decisionmaking about family planning	Proportion	Currently married women 15–49
Not exposed to any of the eight media sources	Proportion	Women 15–49
Neonatal mortality rate ¹	Rate	Children exposed to the risk of mortality
Post-neonatal mortality rate ¹	Rate	Children exposed to the risk of mortality
Infant mortality rate ¹	Rate	Children exposed to the risk of mortality
Child mortality rate ¹	Rate	Children exposed to the risk of mortality
Under-5 mortality rate ¹	Rate	Children exposed to the risk of mortality
Perinatal mortality rate	Rate	Pregnancies of 7 or more months duration to women 15–49 in the 5 years preceding the survey
Stillbirth rate	Rate	Pregnancies of 7 or more months duration to women 15–49 in the 5 years preceding the survey
Early neonatal rate	Rate	Pregnancies of 7 or more months duration to women 15–49 in the 5 years preceding the survey
In any avoidable high-risk category	Proportion	Children born in the 5 years preceding the survey to women 15–49 in the 5 years preceding the survey
Received ANC from a skilled provider	Proportion	Women 15–49 who had a live birth in the 2 years preceding the survey
4+ ANC visits	Proportion	Women 15–49 who had a live birth in the 2 years preceding the survey
8+ ANC visits	Proportion	Women 15–49 who had a live birth in the 2 years preceding the survey
Took any iron-containing supplements	Proportion	Women 15–49 who had a live birth in the 2 years preceding the survey
Mothers protected against tetanus for last birth	Proportion	Women 15–49 with a live birth in the 2 years preceding the survey

(Continued...)

Table B.1—Continued

Variable	Estimate	Base population
WOMEN		
Delivered in a health facility	Proportion	Live births in the 2 years preceding the survey
Delivered by a skilled provider	Proportion	Live births in the 2 years preceding the survey
Delivered by C-section	Proportion	Live births in the 2 years preceding the survey
Women with postnatal check during first 2 days	Proportion	Women 15–49 with a live birth in the 2 years preceding the survey
Newborns with postnatal check during first 2 days	Proportion	Most recent live births in the 2 years preceding the survey
Any problem accessing health care	Proportion	Women 15–49
Ever had vaccination card	Proportion	Children 12–23 months
Received BCG vaccination	Proportion	Children 12–23 months
Received DPT-HepB-Hib vaccination (3 doses)	Proportion	Children 12–23 months
Received pneumococcal vaccination (3 doses)	Proportion	Children 12–23 months
Received MCV 1 vaccination (12–23 months)	Proportion	Children 12–23 months
Fully vaccinated according to national schedule (12–23 months)	Proportion	Children 12–23 months
Received MCV 2 vaccination (24–35 months)	Proportion	Children 24–35 months
Fully vaccinated according to national schedule (24–35 months)	Proportion	Children 24–35 months
Sought treatment for diarrhoea	Proportion	Children under 5 with diarrhoea in last 2 weeks
Treated with ORS	Proportion	Children under 5 with diarrhoea in last 2 weeks
Height-for-age (-3SD)	Proportion	Children under 5 who were measured
Height-for-age (-2SD)	Proportion	Children under 5 who were measured
Weight-for-height (-2SD)	Proportion	Children under 5 who were measured
Weight-for-height (+2SD)	Proportion	Children under 5 who were measured
Weight-for-age (-2SD)	Proportion	Children under 5 who were measured
Exclusive breastfeeding	Proportion	Youngest children 0–5 months living with their mother
Minimum dietary diversity (children 6–23 months)	Proportion	Youngest children 6–23 months living with their mother
Body Mass Index (BMI) <18.5	Proportion	Women 20–49 who were measured
Body Mass Index (BMI) ≥25	Proportion	Women 20–49 who were measured
Body Mass Index-for-age (-2SD)	Proportion	Adolescent women 15–19 who were measured
Body Mass Index-for-age (+1SD)	Proportion	Adolescent women 15–19 who were measured
Minimum dietary diversity (women 15–49)	Proportion	Women 15–49
Child slept under an ITN last night	Proportion	Children under 5 in households
Pregnant women slept under an ITN last night	Proportion	Pregnant women 15–49
Received 3+ doses of SP/Fansidar	Proportion	Women 15–49 with a live birth in the 2 years preceding the survey
Child has fever in last 2 weeks	Proportion	Child under 5
Child had blood taken from finger/heel	Proportion	Child under 5 who had fever in the last 2 weeks
Child took ACT	Proportion	Child under 5 with fever in last 2 weeks who received any antimalarial medications
Discriminatory attitudes towards people with HIV	Proportion	Women 15–49 [who have heard of HIV/AIDS]
Stigma and discrimination experienced by people living with HIV in community settings	Proportion	Women 15–49 who self-report a positive HIV test result
Condom use at last sex	Proportion	Women 15–49 with non-marital, non-cohabiting partner in last 12 months
Tested for HIV in the past 12 months and received the results of the last test	Proportion	Women 15–49
Employed in last 12 months	Proportion	Currently married women 15–49
Employed in last 12 months, but not paid	Proportion	Currently married women 15–49 employed in last 12 months
Mobile phone ownership	Proportion	Women 15–49
Have and use a bank account or mobile phone for financial transactions	Proportion	Women 15–49
Participate in decisionmaking (all three decisions)	Proportion	Currently married women 15–49
Agree with at least one specified reason a husband is justified in wife beating	Proportion	Women 15–49
Make own decisions about sexual relations, contraceptive use, and reproductive care	Proportion	Currently married women 15–49
Experienced physical violence since age 15 by any perpetrator	Proportion	All Women 15–49
Experienced sexual violence by any perpetrator ever	Proportion	All Women 15–49
Experienced sexual violence by any non-intimate partner	Proportion	All Women 15–50
Experienced physical/sexual violence by the current or most recent husband or intimate partner ever	Proportion	Ever-married women 15–49
Experienced emotional/physical/sexual violence by any husband or intimate partner ever	Proportion	Ever-married women 15–49
Experienced emotional/physical/sexual violence by any husband or intimate partner ever in the past 12 months	Proportion	Ever-married women 15–49
MEN		
Urban residence	Proportion	Men 15–49
No education	Proportion	Men 15–49
Secondary education or higher	Proportion	Men 15–49
Literacy	Proportion	Men 15–49
Use of the internet in last 12 months	Proportion	Men 15–49
Current tobacco use	Proportion	Men 15–49
Currently married/in union	Proportion	Men 15–49
Had sexual intercourse before age 18	Proportion	Men 20–49
Want no more children	Proportion	Currently married men 15–49
Want to delay next birth at least 2 years	Proportion	Currently married men 15–49
Ideal number of children	Mean	Men 15–49 with numeric responses
Discriminatory attitudes towards people with HIV	Proportion	Men 15–49 [who have heard of HIV/AIDS]
Stigma and discrimination experienced by people living with HIV in community settings	Proportion	Men 15–49 who self-report a positive HIV test result

(Continued...)

Table B.1—Continued

Variable	Estimate	Base population
	MEN	
Condom use at last sex	Proportion	Men 15–49 with non-marital, non-cohabiting partner in last 12 months
Tested for HIV in the past 12 months and received the results of the last test	Proportion	Men 15–49
Male circumcision	Proportion	Men 15–49
Mobile phone ownership	Proportion	Men 15–49
Have and use a bank account or mobile phone for financial transactions	Proportion	Men 15–49
Agree with at least one specified reason a husband is justified in wife beating	Proportion	Men 15–49

¹ The mortality rates are calculated for 5 years before the survey for the national sample, urban, and rural samples and for the 10 years before the survey for regional samples.

41	464	0.7	394	0.6	Total	70,454	100.0	66,029	100.0

Note: The de facto population includes all residents and nonresidents who stayed in the household the night before the interview.

Table C.2.1 Age distribution of eligible and interviewed women

De facto household population of women age 10–54, number and percent distribution of interviewed women age 15–49, and percentage of eligible women who were interviewed (weighted), by 5-year age groups, Kenya DHS 2022

Age group	Household population of women age 10–54	Interviewed women age 15–49		Percentage of eligible women interviewed
	Number	Number	Percentage	
10–14	9,649	na	na	na
15–19	6,325	5,838	18.5	92.3
20–24	6,361	5,978	18.9	94.0
25–29	5,892	5,565	17.6	94.5
30–34	4,693	4,524	14.3	96.4
35–39	4,505	4,298	13.6	95.4
40–44	3,291	3,066	9.7	93.1
45–49	2,496	2,344	7.4	93.9
50–54	2,688	na	na	na
15–49	33,564	31,613	100.0	94.2
Ratios				
10–14 to 15–19	152.6	na	na	na
50–54 to 45–49	107.7	na	na	na

Note: The de facto population includes all residents and nonresidents who stayed in the household the night before the interview. Weights for both household population of women and interviewed women are household weights. Age is based on the Household Questionnaire.
na = not applicable

Table C.2.2 Age distribution of eligible and interviewed men

De facto household population of men age 10–59, number and percent distribution of interviewed men age 15–49[54/59], and percentage of eligible men who were interviewed (weighted), by 5-year age groups, Kenya DHS 2022

Age group	Household population of men age 10–59	Interviewed men age 15–49 [54/59]		Percentage of eligible men interviewed
	Number	Number	Percentage	
10–14	4,919	na	na	na
15–19	3,554	3,187	22.1	89.7
20–24	2,681	2,386	16.5	89.0
25–29	2,569	2,181	15.1	84.9
30–34	2,241	1,850	12.8	82.6
35–39	1,952	1,605	11.1	82.2
40–44	1,674	1,364	9.4	81.5
45–49	1,205	1,058	7.3	87.8
50–54	925	820	5.7	88.7
55–59	960	na	na	na
15–54	1,6801	14,452	100.0	81.4
Ratios				
10–14 to 15–19	138.4	na	na	138.4
55–59 to 50–54	1.0	na	na	79.1

Note: The de facto population includes all residents and nonresidents who stayed in the household the night before the interview. Weights for both household population of men and interviewed men are household weights. Age is based on the household questionnaire.
na = not applicable

¹ Ten children were measured twice for each standardisation and re-standardisation exercise.

² Trainees' precision and accuracy are defined in terms of a technical error of measurement (TEM), which is calculated as: $\sqrt{\sum(D^2)/(2N)}$ where D is the difference in height and N is the number of repeat measurements. An acceptable TEM according to WHO-UNICEF is a TEM of <0.6 cm for precision and <0.8 cm for accuracy.

Table C.8 Height and weight data completeness and quality for children

Among children under age 5 (age 0–59 months) who were eligible for anthropometry, percentage with incomplete or missing data for height, weight, or month or year of birth; among children with complete height and age, percentage with implausible data for height-for-age; among children with complete weight and height, percentage with implausible data for weight-for-height; and, among children with complete weight and age, percentage with implausible data for weight-for-age; and among all children under age 5 who were eligible for anthropometry, percentage with valid data for height-for-age, weight-for-height, or weight-for-age, according to background characteristics (unweighted), Kenya DHS 2022

¹ Child's height in centimetres is missing, child was not present, measurement of child was refused, and "other" result codes

² Child's weight in kilograms is missing, child was not present, measurement of child was refused, and "other" result codes

³ Incomplete date of birth; a complete date of birth is month/day/year or month/year.

⁴ Implausible cases for height-for-age are defined as more than 6 standard deviations (SD) above or below the standard population median (Z-scores) based on the WHO Child Growth Standards among children with complete height and month/year of birth data.

⁵ Complete age is calculated from month and year of birth.

⁶ Implausible cases for weight-for-height are defined as more than 5 SD above or below the standard population median (Z-scores) based on the WHO Child Growth Standards among children with complete weight and height data.

⁷ Implausible cases for weight-for-age are defined as more than 5 SD above or 6 SD below the standard population median (Z-scores) based on the WHO Child Growth Standards among children with complete weight and month/year of birth data.

⁸ No missing data, incomplete data, or implausible data

⁹ Includes children whose mothers are deceased

¹⁰ For women who are not interviewed, information is taken from the Household Questionnaire. Excludes children whose mothers are not listed in the Household Questionnaire. Includes children whose mothers are deceased ¹⁰ For women who are not interviewed, information is taken from the Household Questionnaire. Excludes children whose mothers are not listed in the Household Questionnaire. No education includes informal education (madrasa/duksi/adult education), and more than secondary includes middle-level colleges and universities. Secondary includes people who reported vocational training as the highest education level attended.

Table C.9 Height measurements from random subsample of measured children

Differences in first height measurement and second height measurement among children under age 5 (0–59 months) randomly selected and remeasured, according to region and measurer (unweighted), Kenya DHS 2022

Table C.12. Heaping in anthropometric measurements for children (digit preference)

Distribution of weight and height/length measurements by decimal digit recorded (unweighted), Kenya DHS 2022

Digit	Weight		Height or length	
	Number	Percent	Number	Percent
0	2,025	10.1	1,505	7.5
1	1,912	9.6	1,893	9.5
2	2,018	10.1	2,394	12.0
3	2,028	10.1	2,280	11.4
4	1,931	9.7	2,216	11.1
5	2,105	10.5	2,154	10.8
6	1,965	9.8	2,090	10.5
7	1,937	9.7	1,981	9.9
8	2,026	10.1	1,783	8.9
9	2,037	10.2	1,652	8.3
Total	19,984	100.0	19,948	100.0
Index of dissimilarity ¹	na	1.2	na	5.8

Note: The table includes all children with weight and height/length measurements, regardless of the completeness of date of birth information and cases with implausible data. Both weight and length/height measurements are recorded with one decimal digit.

na = not applicable

¹ The index of dissimilarity is a measure of digit preference, which is calculated as one-half of the sum of absolute differences between the observed and expected percentage. It can be interpreted as the percent of values that would need to be redistributed in order to achieve a uniform distribution.

Note: Age at the beginning of the school year is calculated from dates of birth of household members or by rejuvenating household members based on the date of the survey, the date after start of the school year, and completed age at the time of survey. Levels and grades refer to the current school year, or the most recent school year if data collection was completed between school years. Respondents whose current or previous level of education was vocational training have been excluded from this table.

^a Those age 25 at the time of interview who were age 24 at the beginning of school year are excluded from the table since current attendance was only collected for those age 4–24 years at the time of interview

Table C.16 Vaccination cards photographed

Percentage of children under age 3 reported to have a vaccination card, percentage whose vaccination card was seen by the interviewer, percentages whose vaccination card was photographed or was not photographed by reason, and among children with a vaccination card seen, percentage of cards photographed, according to background characteristics (weighted) Kenya DHS 2022

Background characteristic	Percentage of children reported to have a vaccination card	Percentage of children whose vaccination card was seen by interviewer	Percentage of children whose vaccination card was photographed	Percentage of children whose vaccination card was not photographed as permission was not received	Percentage of children whose vaccination card was not photographed for other reasons	Number of children	Among children with a vaccination card seen	
							Percentage of vaccination cards photographed	Number of children

INTRODUCTION AND CONSENT

Hello. My name is _____. I am working with Kenya National Bureau of Statistics. We are conducting a survey about health and other topics all over Kenya. The information we collect will help the government to plan health services. Your household was selected for the survey. I would like to ask you some questions about your household. The questions usually take about 30 to 60 minutes. All of the answers you give will be confidential and will not be shared with anyone other than members of our survey team. You don't have to be in the survey, but we hope you will agree to answer the questions since your views are important. If I ask you any question you don't want to answer, just let me know and I will go on to the next question or you can stop the interview at any time. In case you need more information about the survey, you may contact the person listed on this card.

GIVE CARD WITH CONTACT INFORMATION

Do you have any questions?
May I begin the interview now?

FOLLOW-ON STUDY CONSENT

400 In the coming days, another team from Kenya National Bureau of Statistics would like to visit your household to ask additional questions about health and health care services. The information will be used by the Government of Kenya to plan strategies and programs aimed at improving the health and health services in your community. On behalf of your household, your permission is completely voluntary and you can withdraw this permission at any time. However, we hope you will agree.

Do you have any questions?

Do you agree to another visit by a Kenya National Bureau of Statistics team?

INTRODUCTION AND CONSENT

Hello. My name is _____. I am working with Kenya National Bureau of Statistics. We are conducting a survey about health and other topics all over Kenya. The information we collect will help the government to plan health services. Your household was selected for the survey. I would like to ask you some questions about your household. The questions usually take about 30 to 60 minutes. All of the answers you give will be confidential and will not be shared with anyone other than members of our survey team. You don't have to be in the survey, but we hope you will agree to answer the questions since your views are important. If I ask you any question you don't want to answer, just let me know and I will go on to the next question or you can stop the interview at any time. In case you need more information about the survey, you may contact the person listed on this card.

GIVE CARD WITH CONTACT INFORMATION

Do you have any questions?
May I begin the interview now?

SELECTION OF WOMAN FOR THE DOMESTIC VIOLENCE QUESTIONS (PAPER OPTION)

100	<p>ONLY ONE INDIVIDUAL (ONE WOMAN) SHOULD BE SELECTED FOR DOMESTIC VIOLENCE QUESTIONS</p> <p>CHECK COVER PAGE: HOUSEHOLD SELECTED FOR WOMAN'S DV MODULE?</p> <p style="text-align: center;"> YES <input type="checkbox"/> NO <input type="checkbox"/> </p> <p style="text-align: right; margin-right: 20px;">→ 101</p>
-----	--

LOOK AT THE LAST DIGIT OF THE HOUSEHOLD QUESTIONNAIRE SERIAL NUMBER ON THE COVER PAGE. THIS IS THE ROW NUMBER YOU SHOULD GO TO. CHECK THE TOTAL NUMBER OF ELIGIBLE WOMEN (COLUMN 9) IN THE HOUSEHOLD SCHEDULE. THIS IS THE COLUMN NUMBER YOU SHOULD GO TO. FOLLOW THE SELECTED ROW AND COLUMN TO THE CELL WHERE THEY MEET AND CIRCLE THE NUMBER IN THE CELL. THIS IS THE NUMBER OF THE WOMAN SELECTED FOR THE DOMESTIC VIOLENCE QUESTIONS FROM THE LIST OF ELIGIBLE WOMEN IN COLUMN 9 OF THE HOUSEHOLD SCHEDULE. WRITE THE NAME AND LINE NUMBER OF THE SELECTED WOMAN IN THE SPACE BELOW THE TABLE.

EXAMPLE: THE HOUSEHOLD QUESTIONNAIRE SERIAL NUMBER IS '716' AND THE HOUSEHOLD SCHEDULE COLUMN 9 SHOWS THAT THERE ARE THREE ELIGIBLE WOMEN AGE 15-49 IN THE HOUSEHOLD (LINE NUMBERS 02, 04, AND 05). SINCE THE LAST DIGIT OF THE HOUSEHOLD SERIAL NUMBER IS '6' GO TO ROW '6' AND SINCE THERE ARE THREE ELIGIBLE WOMEN IN THE HOUSEHOLD, GO TO COLUMN '3'. FOLLOW THE ROW AND COLUMN AND FIND THE NUMBER IN THE CELL WHERE THEY MEET ('2') AND CIRCLE THE NUMBER. NOW GO TO THE HOUSEHOLD SCHEDULE AND FIND THE SECOND WOMAN WHO IS ELIGIBLE FOR THE WOMAN'S INTERVIEW (LINE NUMBER '04' IN THIS EXAMPLE). WRITE HER NAME AND LINE NUMBER IN THE SPACE BELOW THE TABLE.

FOLLOW-ON STUDY CONSENT

400 In the coming days, another team from Kenya National Bureau of Statistics would like to visit your household to ask additional questions about health and health care services. The information will be used by the Government of Kenya to plan strategies and programs aimed at improving the health and health services in your community. On behalf of your household, your permission is completely voluntary and you can withdraw this permission at any time. However, we hope you will agree.

Do you have any questions?
Do you agree to another visit by a Kenya National Bureau of Statistics team?

SUPERVISOR'S OBSERVATIONS

INTRODUCTION AND CONSENT

Hello. My name is _____. I am working with Kenya National Bureau of Statistics. We are conducting a survey about health and other topics all over Kenya. The information we collect will help the government to plan health services. Your household was selected for the survey. The questions usually take about 30 to 90 minutes. All of the answers you give will be confidential and will not be shared with anyone other than members of our survey team. You don't have to be in the survey, but we hope you will agree to answer the questions since your views are important. If I ask you any question you don't want to answer, just let me know and I will go on to the next question or you can stop the interview at any time.

In case you need more information about the survey, you may contact the person listed on the card that has already been given to your household.

Do you have any questions?
May I begin the interview now?

NO.	QUESTIONS AND FILTERS	CODING CATEGORIES	SKIP
ECDA	<p>CHECK 220, 224, 225 AND 226 IN THE PREGNANCY HISTORY: ANY SURVIVING CHILDREN BORN 24-59 MONTHS BEFORE THE SURVEY WHO LIVE WITH THE RESPONDENT?</p> <p>ONE OR MORE SURVIVING CHILDREN BORN 24-59 MONTHS BEFORE THE SURVEY LIVING WITH THE MOTHER <input type="checkbox"/></p>	<p>NO SURVIVING CHILDREN BORN 24-59 MONTHS BEFORE THE SURVEY LIVING WITH THE MOTHER <input type="checkbox"/></p>	701
ECDB	<p>Now I would like to ask you some questions about your children age 2-4 years who live with you, starting with the youngest. These questions are about certain things they are currently able to do. Please keep in mind that children can develop and learn at a different pace. For example, some start talking earlier than others, or they might already say some words but not yet form sentences. So, it is fine if your child is not able to do all the things I am going to ask you about. You can let me know if you have any doubts about what answer to give.</p>		
ECDC	<p>RECORD THE NAME AND PREGNANCY HISTORY NUMBER FROM 215 AND 218 OF THE SURVIVING CHILDREN BORN 24-59 MONTHS BEFORE THE SURVEY LIVING WITH THE RESPONDENT, STARTING WITH THE YOUNGEST.</p> <p>NAME OF CHILD _____ PREGNANCY HISTORY NUMBER .. <input type="text"/> <input type="text"/></p>		
ECD01	Can (NAME) walk on an uneven surface, for example, a bumpy or steep road, without falling?	YES 1 NO 2 DON'T KNOW 8	
ECD02	Can (NAME) jump up with both feet leaving the ground?	YES 1 NO 2 DON'T KNOW 8	
ECD03	Can (NAME) dress (him/herself), that is, put on pants and a shirt, without help?	YES 1 NO 2 DON'T KNOW 8	
ECD04	Can (NAME) fasten and unfasten buttons without help?	YES 1 NO 2 DON'T KNOW 8	
ECD05	Can (NAME) say 10 or more words, like 'mama' or 'ball'?	YES 1 NO 2 DON'T KNOW 8	
ECD06	Can (NAME) speak using sentences of 3 or more words that go together, for example, "I want water" or "The house is big"?	YES 1 NO 2 DON'T KNOW 8	ECD08
ECD07	Can (NAME) speak using sentences of 5 or more words that go together, for example, "The house is very big"?	YES 1 NO 2 DON'T KNOW 8

1103B	Are you receiving any treatment for breast cancer?	YES 1 NO 2				
1104	Now I'm going to ask you about tests a healthcare worker can do to check for cervical cancer, which is cancer in the cervix. The cervix connects the womb to the vagina. To be checked for cervical cancer, a woman is asked to lie on her back with her legs apart. Then the healthcare worker will use a brush or swab to collect a sample from the cervix through the vagina. The sample is sent to a laboratory for testing. This test is called a Pap smear or HPV test. Another method is called a VIA or Visual Inspection with Acetic Acid. In this test, the healthcare worker puts vinegar on the cervix to see if there is a reaction.					
1105	Has a doctor or other healthcare worker ever tested you for cervical cancer?	YES 1 NO 2 DON'T KNOW 8				
1105A	Have you ever been told by a doctor or other healthcare worker that you have cervical cancer?	YES 1 NO 2	→ 1106

INTRODUCTION AND CONSENT

Hello. My name is _____. I am working with Kenya National Bureau of Statistics. We are conducting a survey about health and other topics all over Kenya. The information we collect will help the government to plan health services. Your household was selected for the survey. The questions usually take about 30 to 60 minutes. All of the answers you give will be confidential and will not be shared with anyone other than members of our survey team. You don't have to be in the survey, but we hope you will agree to answer the questions since your views are important. If I ask you any question you don't want to answer, just let me know and I will go on to the next question or you can stop the interview at any time.

In case you need more information about the survey, you may contact the person listed on the card that has already been given to your household.

Do you have any questions?
May I begin the interview now?

SIGNATURE OF INTERVIEWER _____ DATE _____

RESPONDENT AGREES TO BE INTERVIEWED .. 1 ↓
RESPONDENT DOES NOT AGREE TO BE INTERVIEWED .. 2 → END

SECTION 1. RESPONDENT'S BACKGROUND

NO.	QUESTIONS AND FILTERS	CODING CATEGORIES	SKIP

INTRODUCTION AND CONSENT

Hello. My name is _____. I am working with Kenya National Bureau of Statistics. We are conducting a survey about health and other topics all over Kenya. The information we collect will help the government to plan health services. Your household was selected for the survey. The questions usually take about 20 minutes. All of the answers you give will be confidential and will not be shared with anyone other than members of our survey team. You don't have to be in the survey, but we hope you will agree to answer the questions since your views are important. If I ask you any question you don't want to answer, just let me know and I will go on to the next question or you can stop the interview at any time.

In case you need more information about the survey, you may contact the person listed on the card that has already been given to your household.

Do you have any questions?
May I begin the interview now?

SIGNATURE OF INTERVIEWER _____ DATE _____

NO.	QUESTIONS AND FILTERS	CODING CATEGORIES	SKIP
101	RECORD THE TIME.	HOURS MINUTES	
102	What county were you born in? REFER TO COUNTY CODE LIST IN INTERVIEWER'S MANUAL	COUNTY CODE OUTSIDE OF KENYA 96	→ 104
103	Which country were you born in?	COUNTRY	
104	How long have you been living continuously in (NAME OF CURRENT CITY, TOWN OR VILLAGE OF RESIDENCE)? IF LESS THAN ONE YEAR, RECORD '00' YEARS.	YEARS ALWAYS/NEVER MOVED 95 VISITOR 96	→ 110
105	CHECK 104: 00 - 04 YEARS <input type="checkbox"/> ↓ 05 YEARS OR MORE <input type="checkbox"/>		→ 107

116	IF ANOTHER CHILD, GO TO 102 IN ADDITIONAL QUESTIONNAIRE; IF NO MORE CHILDREN, END INTERVIEW.	

BIOMARKER: FOOTNOTES

- (1) This section should be adapted for country-specific survey design.
- (2) Customize the maximum number of visits expected depending on the overall fieldwork plan; the smaller the subsample in which anthropometry is being conducted, the larger the number of visits that will be feasible in the time allotted for each cluster.
- (3) Remove the section for recording the name and ID number of the CAPI supervisor if the survey does not have CAPI supervisors who are separate from the team supervisors.
- (4) In countries where the weighing scale shows the weight to only one decimal place, retain only one box after the decimal point and delete the first '9' from the other three codes.
- (5) Adapt wording of instruction to accommodate local practices such as brass neck coils or other heavy ornamental jewelry that cannot be removed.
- (6) Adapt wording of instruction to accommodate local practices.
