DHS COMPARATIVE STUDIES

Unmet Need 1990-1994

DEMOGRAPHIC AND HEALTH SURVEYS The Demographic and Health Surveys (DHS) is a 13-year project to assist government and private agencies in developing countries to conduct national sample surveys on population and maternal and child health. Funded primarily by the United States Agency for International Development (USAID), DHS is administered by Macro International Inc. in Calverton, Maryland. The main objectives of the DHS program are (1) to promote widespread dissemination and utilization of DHS data among policymakers, (2) to expand the international population and health database, (3) to advance survey methodology, and (4) to develop in participating countries the skills and resources necessary to conduct high-quality demographic and health surveys. For information about the Demographic and Health Surveys program, write to DHS, Macro International Inc., 11785 Beltsville Drive, Suite 300, Calverton, MD 20705, U.S.A. (Telephone 301-572-0200; Telefax 301-572-0999).

8.2		10.1	Countries	
8.3	Demand and unmet need by age groups: Never- married women	10.1	Total demand for family planning for all women in 19 sub-Saharan countries regardless	
8.4	Use by residence, education and media exposure:		of marital status	
	Never-married women	11.1	Estimates of the demand for family planning	
9.1	Exposure status: Formerly married women 28		under two assumptions of the satisfaction of unmet need	
9.2	Demand and unmet need: Formerly married women	11.2	Total fertility rates associated with increases in demand for family planning under two	
9.3	Demand and unmet need by age groups: Formerly		assumptions	
	married women	11.3	Percent of the distance to replacement	
9.4	Use by residence, education and media exposure: Formerly married women		fertility that would result from satisfying unmet need (Model 4)	
10.1	Demand and unmet need: All women 32			
11.1	Estimates of demand for family planning: Four models			
11.2	Total fertility rates associated with estimates of the demand for family planning 39			
11.3	Reductions in total fertility rate implied by the satisfaction of unmet need: Four models 42			
Figures				
3.1	Unmet need among currently married women: Kenya, 1993			
4.1	Total demand for family planning: Unmet need and current use of contraception			

Preface

One of the most significant contributions of the DHS program is the creation of an internationally comparable body of data on the demographic and health characteristics of populations in developing countries. The DHS Comparative Studies series and the DHS Analytical Reports series examine these data across countries in a comparative framework, focusing on specific topics.

The objectives of DHS comparative research are: to describe similarities and differences between countries and regions, to highlight subgroups with specific needs, to provide information for policy formulation at the international level, and to examine individual country results in an international context. While Comparative Studies are primarily descriptive, Analytical Reports utilizes a more analytical approach.

The comparative analysis of DHS data is carried out primarily by staff at the DHS headquarters in Calverton, Maryland. The topics covered are selected by staff in conjunction with the DHS Scientific Advisory Committee and USAID.

The Comparative Studies are based on a variable number of data sets reflecting the number of countries for which data were available at the time the report was prepared. Each report provides detailed tables and graphs for countries in four regions: sub-Saharan Africa, the Near East and North Africa, Asia, and Latin America and the Caribbean. Survey-related issues such as questionnaire comparability, survey procedures, data quality, and methodological approaches are addressed in each report, as necessary. Where appropriate, data from previous DHS surveys are used to evaluate trends over time.

Comparative Studies published under the current phase of the DHS program (DHS-III) are, in some cases, updates and expansions of reports published earlier in the series. Other reports, however, will cover new topics that reflect the expanded substantive scope of the DHS program.

It is anticipated that the availability of comparable information for a large number of developing countries will have longterm usefulness for analysts and policymakers in the fields of international population and health.

> Martin Vaessen Project Director

Acknowledgments

The authors wish to thank Mickey Marckwardt and Shea Rutstein of DHS for their helpful review of this manuscript. Many other colleagues have contributed to the research along the way, notably Martin Vaessen of DHS, John Bongaarts of The Population Council and Steven Sinding of the Rockefeller Foundation. The authors also wish to acknowledge both the Andrew Mellon Foundation and the Rockefeller Foundation for their partial support of some of the work done at Princeton.
