Fact Sheet

Liberia

2019-20 Liberia Demographic and Health Survey (LDHS)

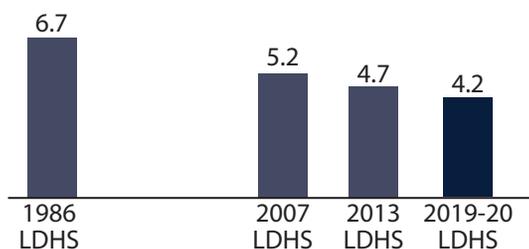

The 2019-20 Liberia Demographic and Health Survey (LDHS) provides data for monitoring the health situation of the population in Liberia. The 2019-20 LDHS is the 5th Demographic and Health Survey conducted in the country. The survey is based on a nationally representative sample. It provides estimates at the national level, for urban and rural areas, for each of the 5 regions, and, for most indicators, for each of the 15 counties.

Number interviewed **Response rate**

Households	9,068	99%
Women 15-49	8,065	96%
Men 15-59	4,249	94%

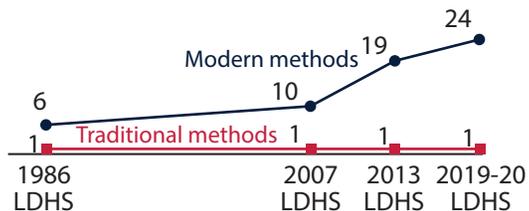

Trends in Fertility

Births per woman for the 3-year period before the survey

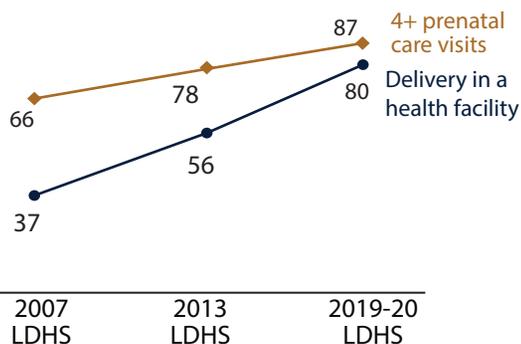

Trends in Contraceptive Use

Percentage of married women currently using a contraceptive method

Trends in Maternal Health

Percentage of women age 15-49 who had a live birth in the 5 years before the survey and percentage of live births in the 5 years before the survey

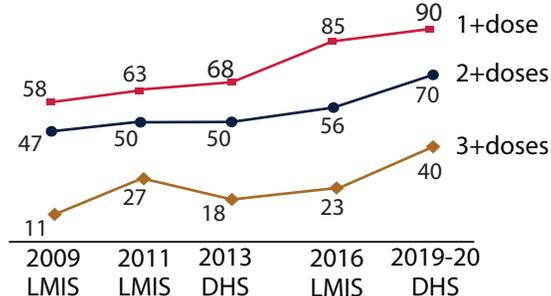

For every 1,000 live births in Liberia, about 7 women die during pregnancy, childbirth, or within 42 days of delivery.

(maternal mortality rate of 742 for the 7-year period before the survey, excludes deaths from accidents or violence)

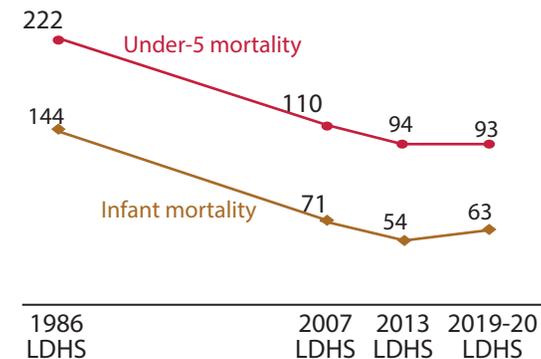

Trends in IPTp Use By Pregnant Women

Percentage of women with a live birth who received at least 1, 2, or 3 doses of SP/Fansidar

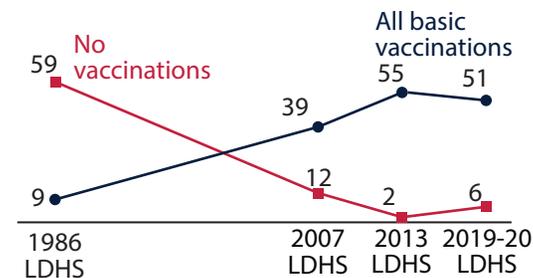

Trends in Childhood Mortality

Deaths per 1,000 live births for the 5-year period before the survey

Trends in Vaccination Coverage

Percentage of children age 12-23 months vaccinated at any time before the survey

Trends in Children's Nutritional Status

Percentage of children under age 5 who are malnourished
