

HIV/AIDS: Results from the 2012 TjDHS

The 2012 Tajikistan Demographic and Health Survey (TjDHS) provides up-to-date information on the population and health situation in Tajikistan. The 2012 TjDHS is the first national demographic and health survey conducted in the country.

The 2012 TjDHS included questions on HIV/AIDS-related knowledge, attitudes, and behaviors.

Knowledge of HIV/AIDS by Education

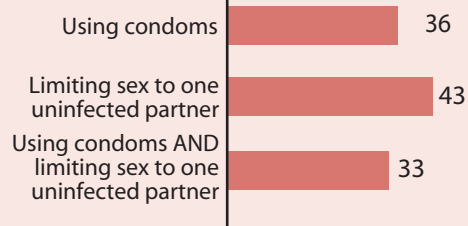

Percent of women 15-49 who have heard of AIDS

Knowledge of HIV Prevention

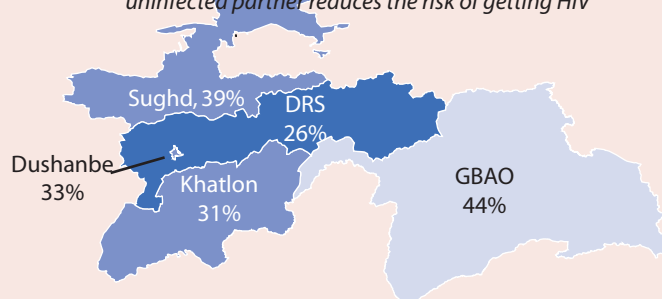

Percent of women 15-49

Percent who know that the risk of HIV can be reduced by:

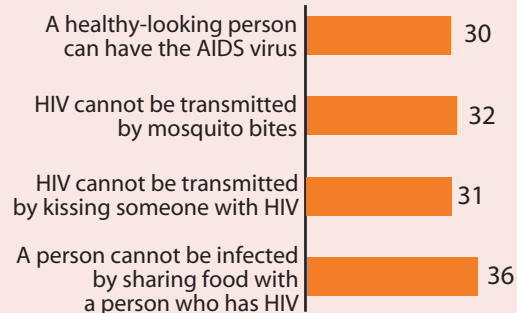

HIV Prevention Knowledge

Percent of women 15-49 who know that using condoms and limiting sexual intercourse to one uninfected partner reduces the risk of getting HIV

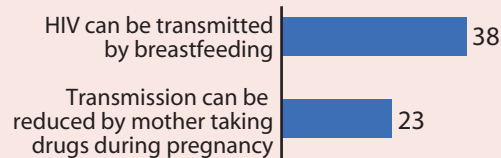

Knowledge about AIDS Transmission

Percent of women 15-49 who know that:

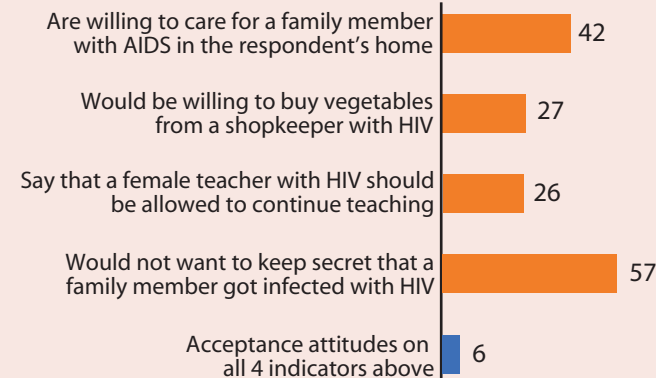

Knowledge of Mother-to-Child Transmission

Percent of women 15-49 who know that:

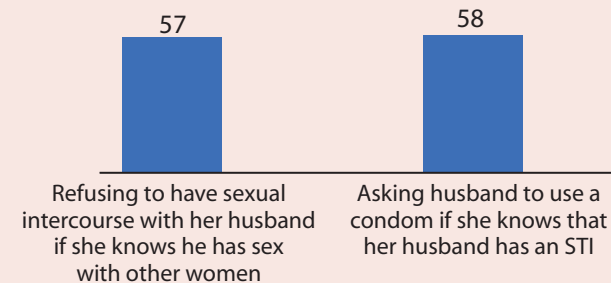

Attitudes Toward People Living with HIV/AIDS

Percent of women 15-49 who:

Attitudes Towards Negotiating Safer Sex with Husband

Percent of women 15-49 who believe that a woman is justified in:

1 in 5 women age 18-49 agree that children age 12-14 years should be taught about using a condom to avoid AIDS

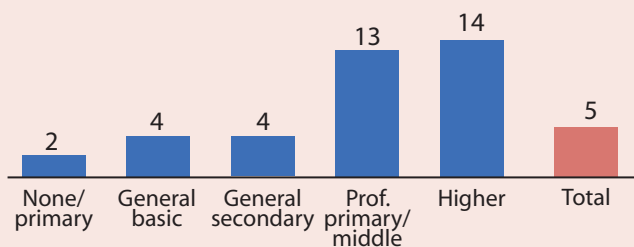

Overall, **85%** of women age 15-49 have **never been tested for HIV.**

Only **5%** have been **tested in the past year** and received the results.

Recent HIV Testing by Education

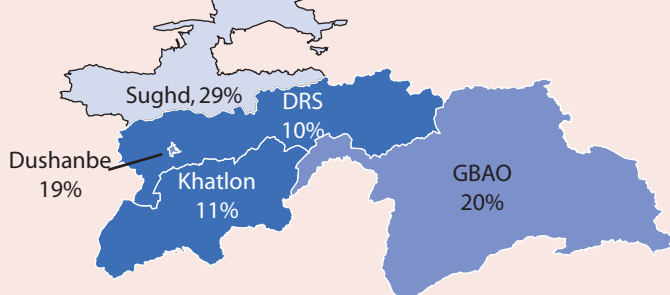

Percent of women 15-49 who have been tested for HIV in the past 12 months and received the results

Only **31%** of women age 15-49 know where to get an HIV test.

HIV Testing During Antenatal Care

Percent women 15-49 who received counseling on HIV and an HIV test during ANC and received the results among those who gave birth in the 2 years before the survey
